

Link Handler

Mine Type

The eSO Setup sets a Mine Type (Link Handler) to the SOSigOffice.exe to start eSO with a Link. The URL is **eso://** and it can also contain all the StartParameter of the SOSigOffice.exe. To separate the Parameter a **|** must be used.

This is working in Offline Application and in the Main Browsers (IE, Firefox, Chrome, Safari, Opera), in most of them the User gets a Warning/Message which he needs to accept.

Sample

eso://	Starts eSO
eso://https://www.stepoverinfo.net/eSO-Samples/Mustermann.pdf https://www.stepoverinfo.net/eSO-Samples/Mustermann.sss	Starts eSO with PDF and SSS, which will be downloaded
eso://c:\Mustermann.pdf -autostartsig -stayontop	It also works with local files

Registry Entries for the Link-Handler

To use that we add the following Registry Entry.

Windows Registry Editor Version 5.00

```
[HKEY_LOCAL_MACHINE\SOFTWARE\Classes\eso] @="URL:eso protocol" "URL Protocol"=""
```

```
[HKEY_LOCAL_MACHINE\SOFTWARE\Classes\eso\DefaultIcon]
```

```
[HKEY_LOCAL_MACHINE\SOFTWARE\Classes\eso\shell]
```

```
[HKEY_LOCAL_MACHINE\SOFTWARE\Classes\eso\shell\Open]
```

```
[HKEY_LOCAL_MACHINE\SOFTWARE\Classes\eso\shell\Open\Command]  
@="\"C:\Programme\StepOver\SignatureOffice\SOSigOffice.exe\" \"%1\""
```

additional Setting for Chrome:

Open "Preferences" of Chrome, you can find it under %LOCALAPPDATA%\Google\Chrome\User Data\Default\Preferences

1. Close Google Chrome.
2. Open the Preferences file and search for `excluded_schemes` in `protocol_handler`.
3. Add the line

```
"eso": false,
```

```
to excluded_schemes.
```

4. Restart Google Chrome.

```
."protection":{"macs":{},"protocol_handler":{"excluded_schemes":{"afp":true,"data":true,"disk":true,"disks":true,"eso":false,"file":true,"hcp":true  
rd":{"ms":{"radio":true}}},"reverse_autologin":{"enabled":false},"rlz_ping_delay":-60,"safebrowsing":{"saw_interstitial_sber2":true,"scout_group_s  
length: 146000 lines: 1 Ln: 1 Col: 139743 Sel: 16 | 0 Dos\Windows UTF-8 INS
```
