

XMLGetContainerContent

Declaration

Delphi

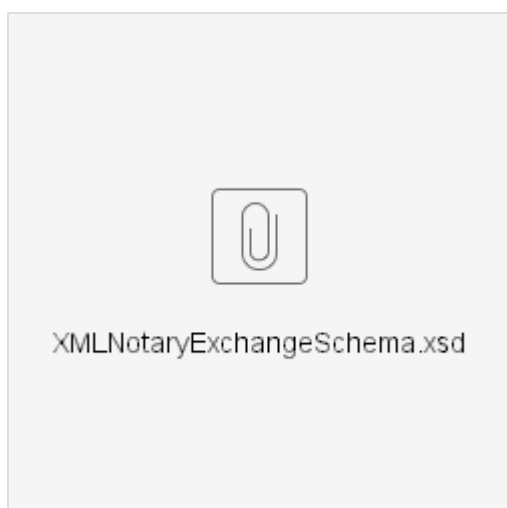

```
function XMLGetContainerContent(): PAnsiChar; stdcall;
```

ActiveX

Description

Returns a string representation of the xml data. Note, this will not return the secure XML content. It is the representation of inner data structure of the secure-xml-notary-exchange schema.

This will deliver a XML defined by the following XSD schema.

Arguments

Argument	Explanation
	no arguments

C# sample

```
AddSignature  
// Clear the internal data state and XML content.
```
