

# XMLSaveNotaryContainerToString

## Declaration

### Delphi

```
function XMLSaveNotaryContainerToString(const TransportKey: PAnsiChar; EncType: Integer;  
Content Type: integer): PAnsiChar; stdcall;
```

### ActiveX

## Description

Generates the secure-notary-exchange protocol.

Encrypt the internal data with the provided TRANSPORT-KEY. This Function returns the content of the secure-XML-container as STRING.

## Arguments

Argument	Explanation
TransportKey	RSA KEY as file or buffer
EncType	0: none; 1:private key; 2:public key
ContentType	0: File; 1: buffer
